PROFESSIONAL EXPERIENCE

Aflac

Software Engineer I

Remote

Jan 2025 – Present

- Engineered Automated Test Framework (ATF) solutions across 5+ ITSM departments, reducing manual QA effort by approximately 60% and improving software release reliability
- Developed and optimized ServiceNow components including Business Rules, Script Includes, UI Policies, and Client Scripts to support enterprise-grade ITSM workflows
- Integrated ServiceNow with SAP Solution Manager to unify ITSM workflows, enabling seamless cross-platform incident and change management across enterprise departments
- Authored REST API scripts for Zephyr and SonarQube to resolve data ingestion failures, restoring accurate test result and code quality data flow into reporting dashboards and ServiceNow pipelines
- Collaborated with cross-functional teams including developers, QA engineers, and ITSM stakeholders to streamline CI/CD deployment and testing pipelines using Agile methodologies

Global Atlantic Financial Group

Information Security Technology Intern

Boston, MA

Jun 2023 – Aug 2023

- Engineered a Python automation pipeline consolidating secretsdump extraction, LDAP querying, and Excel reporting into a single script, cutting credential audit time by approximately 70% and enabling rapid detection of weak, reused, and shared passwords across Active Directory
- Reduced server provisioning and decommissioning overhead by approximately 40% by designing REST API-driven scripts to automate full server lifecycle management
- Led daily security triage operations across CrowdStrike, Vectra, and ServiceNow, triaging alerts and accelerating incident resolution across the enterprise environment

PROJECTS

Bicycle Mapping Application | *Python, Pygame, REST API*

Aug 2023 – Dec 2023

- Developed a multi-functional bicycle mapping application using Python and Pygame, featuring a Shortcut Mode for drawing custom paths on unmarked terrain
- Integrated Open Route Service API for automated and optimized route plotting across mapped regions
- Implemented health-tracking features to calculate water intake and calories burned based on selected route and activity level

MIPS Assembly Simulator | *C++*

Jan 2023 – May 2023

- Developed a MIPS assembly simulator featuring a Tokenizer for code parsing, a Parser for structural analysis, and a virtual machine for instruction execution
- Implemented both GUI and TUI interfaces; applied rigorous unit testing to ensure simulator accuracy and robustness

TECHNICAL SKILLS

Programming Languages: Python, Java, C/C++, TypeScript, JavaScript, HTML/CSS

Libraries & Frameworks: PyTorch, Scikit-Learn, NumPy, Pandas, Matplotlib, PySpark, Plotly, React, Flask, JUnit, Docker

Technologies & Platforms Git, Jira, ServiceNow, CrowdStrike, Vectra

Methodologies: Agile, SDLC, CI/CD, REST APIs, Test Automation, Incident Response

EDUCATION

Virginia Tech

Bachelor of Science, Computer Engineering

Blacksburg, VA

Aug 2020 – Aug 2024
